

Chapter 1. The Golem of Prague	41
1.1. Statistical golems	42
1.2. Statistical rethinking	48
1.3. Tools for golem engineering	65
1.4. Summary	87
Chapter 2. Small Worlds and Large Worlds	90
2.1. The garden of forking data	95
2.2. Building a model	115
2.3. Components of the model	126
2.4. Making the model go	138
2.5. Summary	162
2.6. Practice	163

Chapter 3. Sampling the Imaginary	170
3.1. Sampling from a grid-approximate posterior	179
3.2. Sampling to summarize	181
3.3. Sampling to simulate prediction	204
3.4. Summary	223
3.5. Practice	224
Chapter 4. Geocentric Models	231
4.1. Why normal distributions are normal	235
4.2. A language for describing models	248
4.3. Gaussian model of height	253
4.4. Linear prediction	291
4.5. Curves from lines	344

4.6. Summary	371
4.7. Practice	371
Chapter 5. The Many Variables & The Spurious Waffles	379
5.1. Spurious association	384
5.2. Masked relationship	440
5.3. Categorical variables	463
5.4. Summary	479
5.5. Practice	479
Chapter 6. The Haunted DAG & The Causal Terror	485
6.1. Multicollinearity	490
6.2. Post-treatment bias	510
6.3. Collider bias	524

6.4. Confronting confounding	544
6.5. Summary	559
6.6. Practice	560
Chapter 7. Ulysses' Compass	565
7.1. The problem with parameters	572
7.2. Entropy and accuracy	595
7.3. Golem taming: regularization	627
7.4. Predicting predictive accuracy	636
7.5. Model comparison	659
7.6. Summary	686
7.7. Practice	686

Chapter 8. Conditional Manatees	692
--	------------

8.1. Building an interaction	698
------------------------------	-----

8.2. Symmetry of interactions	729
-------------------------------	-----

8.3. Continuous interactions	735
------------------------------	-----

8.4. Summary	756
--------------	-----

8.5. Practice	757
---------------	-----

Chapter 9. Markov Chain Monte Carlo	765
--	------------

9.1. Good King Markov and his island kingdom	769
--	-----

9.2. Metropolis algorithms	775
----------------------------	-----

9.3. Hamiltonian Monte Carlo	785
------------------------------	-----

9.4. Easy HMC: ulam	806
---------------------	-----

9.5. Care and feeding of your Markov chain	828
--	-----

9.6. Summary	853
9.7. Practice	854
Chapter 10. Big Entropy and the Generalized Linear Model	861
10.1. Maximum entropy	865
10.2. Generalized linear models	900
10.3. Maximum entropy priors	923
10.4. Summary	924
Chapter 11. God Spiked the Integers	926
11.1. Binomial regression	929
11.2. Poisson regression	987
11.3. Multinomial and categorical models	1,023
11.4. Summary	1,041

11.5. Practice	1,041
Chapter 12. Monsters and Mixtures	1,048
12.1. Over-dispersed counts	1,050
12.2. Zero-inflated outcomes	1,067
12.3. Ordered categorical outcomes	1,078
12.4. Ordered categorical predictors	1,109
12.5. Summary	1,124
12.6. Practice	1,125
Chapter 13. Models With Memory	1,131
13.1. Example: Multilevel tadpoles	1,137
13.2. Varying effects and the underfitting/ overfitting trade-off	1,155
13.3. More than one type of cluster	1,174

13.4. Divergent transitions and non-centered priors	1,186
13.5. Multilevel posterior predictions	1,202
13.6. Summary	1,217
13.7. Practice	1,217
Chapter 14. Adventures in Covariance	1,226
14.1. Varying slopes by construction	1,232
14.2. Advanced varying slopes	1,259
14.3. Instruments and causal designs	1,279
14.4. Social relations as correlated varying effects	1,299
14.5. Continuous categories and the Gaussian process	1,314
14.6. Summary	1,357
14.7. Practice	1,357

Chapter 15. Missing Data and Other Opportunities	1,364
15.1. Measurement error	1,368
15.2. Missing data	1,391
15.3. Categorical errors and discrete absences	1,438
15.4. Summary	1,450
15.5. Practice	1,450
Chapter 16. Generalized Linear Madness	1,461
16.1. Geometric people	1,464
16.2. Hidden minds and observed behavior	1,478
16.3. Ordinary differential nut cracking	1,494
16.4. Population dynamics	1,506
16.5. Summary	1,529
